Kendall, M. G. [[Kendall, Maurice George](#)]★A course in the geometry of n dimensions.

Griffin's Statistical Monographs & Courses, No. 8

Hafner Publishing Co., New York 1961 viii+63 pp.

The author's objective is to present that part of the theory of n -dimensional geometry which has statistical applications, and to sketch very briefly what those applications are. The geometrical part occupies 42 pages, and the statistical applications are presented in 21 pages.

This little booklet is written in an attractive style and can be highly recommended to anyone whose needs coincide with the author's objectives. *A. W. Goodman*
